

# Transportation Delivery Modernization

## Case study

A US transportation company with 140 engineers increased velocity by 27%, improved test coverage from 55% to 81%, and reduced hotfix deployment time by 70%.

## The challenge

Manual coordination, uneven coverage, and fear of urgent changes slowed releases in a time-sensitive operational environment. The goal was safer change, faster feedback, and a repeatable route to production.

## The approach

Hill-Top Consultancy mapped the value stream, separated platform constraints from team habits, prioritized risk-based automation, standardized delivery pipelines, and introduced observability and staged rollout measures.

## What we delivered

- Value-stream and release-process assessment
- CI/CD redesign and pipeline standardization
- Test strategy and automation improvement
- Operational dashboards, alerts, and runbooks
- Team coaching and handover

## Outcomes

- 27% increase in delivery velocity
- Test coverage increased from 55% to 81%
- 70% faster hotfix deployment
- A foundation for further cloud modernization
